(a) train vs val, all 90 runs
MLP
TAGConv K=3
SparseGT k=2
best val nmae (%)
final train nmae (%), best checkpoint
(b) train/val gap per scheme
MLP
TAGConv K=3
SparseGT k=2
5% flag
(best val - train) / train (%)
grid
uniform
poisson-disk
slope-adaptive
quadtree
(c) test vs val: graph-metric mismatch
quadtree
poisson-disk
uniform/slope-adaptive
grid
test nmae (%), stride-4 grid
best val nmae (%), training graph
